FUGITIVE VOC INSPECTIONS

Course #262

Fugitive leaks from valves, pumps, and other components contribute significantly to VOC and HAP emissions. This course provides information for conducting effective fugitive VOC emissions inspections at petroleum and chemical processing facilities, bulk terminals, and related sources. Topics include fugitive VOC leak regulations, components and standards, leak detection techniques using portable VOC analyzers, and compliance inspection procedures and safety.

June 25, 2003

8:30 am – 4:30 pm

Cal/EPA Headquarters

1st Floor Training Room

1001 I Street

Sacramento, CA 95814

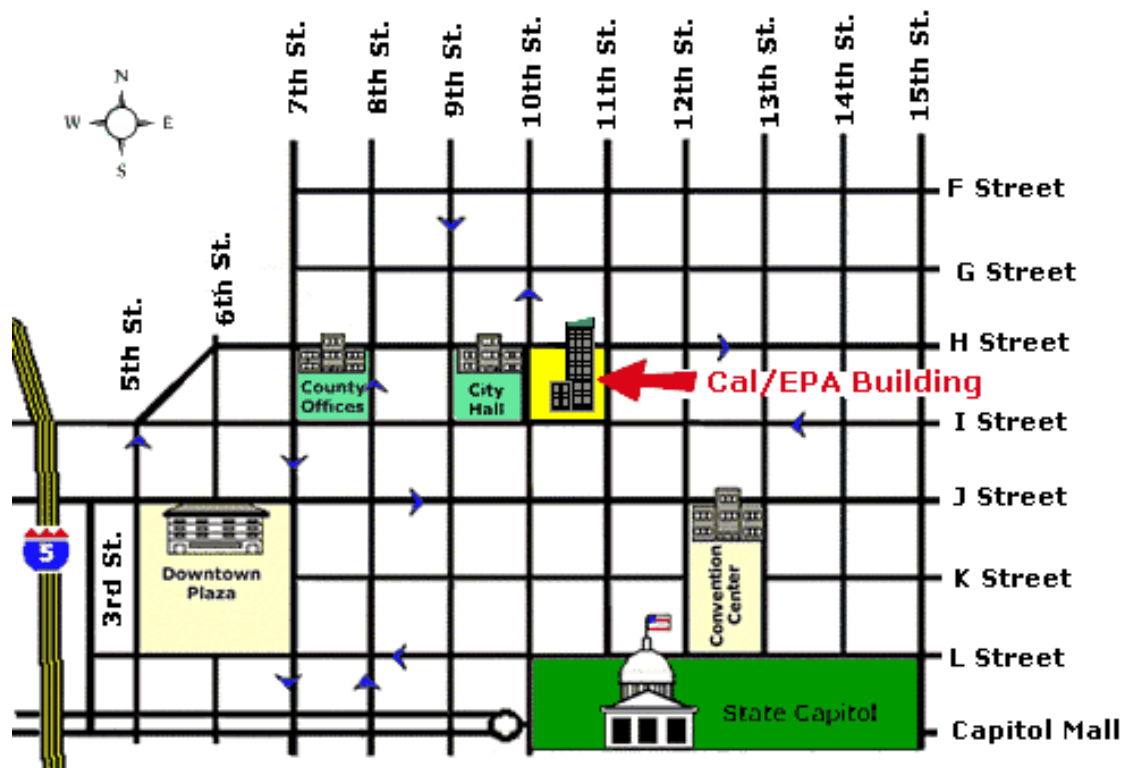

Students will participate in a "mock inspection" at a local facility, using equipment and techniques discussed in the classroom. The field inspection and an exam are required to obtain a certificate of completion. Enrollment fee applies.

Hard Hat, Safety Shoes, Eye & Ear Protection are required.
